## **The products of PITSID Leipzig now available in Japan**

Media World Communications Co., Ltd. (Osaka) in Japan with its president Taku Matsune is now an authorized dealer of the products of PITSID Polygraphische innovative Technik Leipzig GmbH. PITSID is a manufacturer and distributor of measuring and testing equipment for the adjustment of printing presses and for the optimisation of the prepress and printing processes. The products are special devices for the precision-measurement of register, packing height, and pressure, for the determination of the IPA volume concentration, plate punching, and product quality control. The German supplier sells its measuring equipment worldwide through printing machine manufacturers and authorized dealers for the print and media industry. Now the range of PITSID products is also available in Japan. The Leipzig company has signed the contract with Taku Matsune because of his experience as service provider of measuring equipment for the printing industry, and – last but not least - because the manager of Media World Communications is also a guest lecturer at the Japan Printing Academy.
